

Enterprise PORTAL

For **Physicians/Clinicians**

Improve Patient Care **Maximize Business Results**

Clearly, physicians face increasing complexity in what they do and how they do it. Perhaps the most compelling is the need for simple, seamless access to patient and healthcare related information that is real time.

Physicians can now harness the power of the Internet to acquire information, collaborate with peers, accomplish more administrative work in less time, and most importantly, provide better patient care with access to real time information.

Faster Access for Better Care

The easily customizable, web-based format provides a one-stop portal to assist in treatment protocol decision-making, outcome communications, and patient education. With a single sign-on, physicians and clinicians can securely access data from across the enterprise, both inpatient and outpatient information from disparate information systems, content sources and applications for more timely, better-informed patient care decisions.

Improve Patient Care Maximize Business Results

Enterprise Portal for Physicians and Clinicians eliminates the frustration associated with lack of easy access to key information that makes smart decisions possible – including access to hospital records, communications with colleagues, access to subscription-based knowledge and education sites, professional associations, research, government agencies, and more via one point of access.

Systems Integration – Simplified

The Enterprise Portal provides a strategic roadmap to integrate disparate systems and build on existing investment in information technology. Through the integration team, customers access the experience that comes with proven interface development for more than 400 healthcare systems.

Integration is simplified through:

- A team that has been recognized by KLAS with the highest customer satisfaction scores for integration services
- Unmatched system and data integration expertise, including experience with all leading healthcare information systems
- Proven ability to execute smooth implementation
- A dedicated support team that installs, trains, and provides support 24/7
- Continued commitment of resources required to develop enhanced features and functionality

Extend Your Solution

Interested in extending the Enterprise Portal to provide services to other stakeholders? Perhaps, providing additional services to your patient population and the community? The Enterprise Portal for Patients will empower individuals to actively participate in the management of their healthcare with the option to:

- Schedule appointments
- Edit demographic information
- Pay bills online
- Access to lab results
- View discharge instructions and treatment plans

With the Enterprise Portal, Physicians can:

- Access lab results, trending reports, PACs images with transcription, pharmacy, vitals and more with a single login
- Gain a comprehensive view of all clinical information – current and historic
- Access real-time, patient information using PDA and wireless devices – anywhere, anytime
- Receive real-time alerts and visual cues to critical values
- Create customized views by specialty, department or individual user
- Communicate securely with peer-to-peer messaging
- Automatically notify patient's referring Physician/ Primary Care/Family Practice Physicians

Reduced Paperwork Improved Communications Better Results

In addition to providing tools for better patient care, the Enterprise Portal can deliver a number of business benefits to hospitals.

For example, it can:

- Enhance the physician experience, aiding physician recruitment and retention
- Improve quality of care and physician workflow with single point of access to comprehensive patient-centric views - anytime, anywhere
- Support patient safety initiatives with the goal to improve outcomes, reduce length of stay, and improve continuity of care
- Enhance hospital-physician and physician-patient interaction for a win-win-win competitive advantage
- Improve billing process with better quality claims data
- Reduce help desk support requirements and staff training with single solution for user community
